Connecting with problems comes easier than connecting with people. Once one catches my attention, I do not let go. At SenseGrow that meant rebuilding a broken ML platform until it ran at 99.5% uptime across 3,000+ endpoints for 20+ enterprise customers - including a remote monitoring system for oil pumps in Texas where failure was not an option. MSc in AI, First-Class Honours, NCI Dublin (Feb 2025). Currently building Greenfield, a live PC compatibility platform with a graph-based rules engine, retrieval-grounded chatbot, and data pipelines - solo, end-to-end, live in production (136-114-133-166.sslip.io).

SKILLS

ML and AI: Python, PyTorch, TensorFlow, Scikit-learn, OpenCV, Feature Engineering, Model Evaluation, A/B Testing, SHAP, Statistical Analysis, Time-series Forecasting (LSTM, ARIMA)

Software Engineering: FastAPI, REST APIs, PostgreSQL, Cassandra, Apache Kafka, RabbitMQ, Microservices, SQL, Git, Linux

MLOps and Cloud: AWS (EC2, S3, Lambda, SageMaker), Docker, Kubernetes, CI/CD (GitHub Actions), Model Versioning, Production Monitoring, Drift Detection

GenAI: LangChain, LangGraph, ChromaDB, Ollama, RAG Pipelines, Agentic AI Workflows

Tools: GitHub Copilot, Cursor, MLflow, Streamlit, Jupyter, Next.js (working knowledge)

EXPERIENCE

Shift Manager

Jun 2024 – Present

Supermac's, Dublin, Ireland

- Managing daily operations and staff; building Greenfield in parallel as a personal full-stack AI project.

AI Software Engineer

Jan 2022 – Jan 2024

SenseGrow Technologies, Gurugram, India

- Built and maintained production ML pipelines on AWS (EC2, S3, Lambda, Kubernetes) serving 3,000+ industrial endpoints for 20+ enterprise customers. System ran at 99.5% uptime with sub-15s response times for 2 years straight.
- Improved prediction accuracy from 63% to 72% (14% gain) and cut false positive alerts by 8% through rigorous experimentation across LSTM, ARIMA, and ensemble architectures on time-series sensor data.
- Built the full MLOps stack from scratch: CI/CD with GitHub Actions, Docker and Kubernetes for deployments, model versioning, automated testing, and SHAP-based monitoring dashboards. Weekly releases with zero manual steps.
- Worked with data scientists, product managers, and 15+ stakeholders to ship AI features that directly contributed to 3 new enterprise customer wins.

Forward Deployed Software Engineer

Jul 2021 – Oct 2021

FireVisor Systems, Remote

- Deployed 15–20 computer vision microservices (Docker, RabbitMQ) processing 1,000+ manufacturing panels per day across 50–60 plants. Cut inference latency from 80ms to 65ms (19%) through systematic profiling.

PROJECTS

Greenfield – PC Compatibility Platform (Solo, Live in Production)

2025 – Present

136-114-133-166.sslip.io

- Built end-to-end: graph-based compatibility engine (200+ hand-reviewed rules across physical, electrical, performance, and thermal layers), LLM-powered retrieval-grounded chatbot (Ollama, LangChain, Postgres FTS) where the model cannot hallucinate specs because it never has to invent them, substitution-check tool, and build wizard. Stack: Python, FastAPI, Next.js, PostgreSQL, GCP.

Sign Language Translator

2018

Smart India Hackathon – Deloitte Innovation Award

- Built a real-time sign language recognition system using computer vision and deep learning. Won from a national field of 100+ teams.

EDUCATION

MSc in Artificial Intelligence – First-Class Honours, Dean's Honour List

Jan 2024 – Feb 2025

National College of Ireland, Dublin, Ireland

Thesis: Feature-Ranked Backpropagation for Sustainable AI Training. Novel gradient-masking algorithm: 15% compute reduction, 20% energy savings, under 2% accuracy loss on ImageNet-1k. norma.ncirl.ie/7937.

B.Tech in Computer Science and Engineering

2016 – 2020

GGSIPIU, New Delhi, India

AWARDS AND COMMUNITY

PyData Delhi: Co-organizer. Volunteer at PyData Amsterdam and Paris. **Deloitte Innovation Award** winner, Smart India Hackathon 2018.
